## Verklaring **Opwekkingsrendement verwarming en hulpenergie t.b.v. de NEN 7120**

### VERKLARING VAN KIWA

Deze verklaring is gebaseerd op een éénmalige beoordeling door Kiwa van een product, zoals op deze verklaring vermeld, van

### **Inventum B.V.**

Hiermee geeft deze verklaring geen oordeel over andere door de leverancier te leveren producten.

Het product is beoordeeld conform NEN 7120+C2:2012/A1:2017.

De in de bijlage vermelde waarden voor opwekkingsrendementen voor verwarming mogen worden gebruikt in plaats van de waarden zoals die in tabel 14.13 van de NEN 7120 worden gegeven.

De voor hulpenergie vermelde waarden mogen worden gebruikt in plaats van de waarden welke kunnen worden berekend volgens 14.7.2.3 (cv-circulatiepomp) en 14.7.3 (stand-by elektronica) van de NEN 7120.

### **PRODUCTNAAM**

**Ecolution Modul-AIR Solo**

**Ecolution Modul-AIR Flex**

# VERKLARING

## Ecolution Modul-AIR Solo of Ecolution Modul-AIR Flex

### OPWEKKINGSRENDEMENT $\eta_{H;gen;si;hp}$ , ENERGIEFRACTIE $F_{H;gen;si,gpref}$ EN HULPENERGIE $W_{H;aux}$ RUIMTEVERWARMING

De lucht/water-warmtepomp Ecolution Modul-AIR Solo of Ecolution Modul-AIR Flex is een warmtepomp welke warmte uit de ventilatie-afvoerlucht van een woning onttrekt en de opgewekte warmte afgeeft aan het ruimteverwarmingssysteem.

De toestellen zijn bedoeld om samen te werken met een ketel (Modul-AIR Solo) of met een in het toestel geïntegreerde elektrische bijverwarming (Modul-AIR Flex).

De toestellen kunnen hun warmte afgeven aan het reguliere verwarmingssysteem van de woning of, in combinatie met de toevoerluchtmodule WTW-D, deels warmte aan de ventilatietoevoerlucht afgeven.

In de tabellen op de volgende pagina's staat voor de lucht/water-warmtepomp Ecolution Modul-AIR Solo of Ecolution Modul-AIR Flex, het opwekkingsrendement  $\eta_{H;gen;si;hp}$ , uitgedrukt als COP-waarde, de energiefractie  $F_{H;gen;si,gpref}$  en de hulpenergie  $W_{H;aux}$  voor de functie ruimteverwarming van het warmtepompsysteem, afhankelijk van:

- Woning met een laag energiegebruik ( $Q_{H;nd} / A_{g;tot} \leq 150 \text{ MJ/m}^2$ ) of met een hoog energiegebruik ( $Q_{H;nd} / A_{g;tot} > 150 \text{ MJ/m}^2$ );
- De warmtebehoefte  $Q_{H;dis;nren}$  van de woning;
- De ontwerp aanvoertemperatuur  $\eta_{sup}$  van het verwarmingssysteem.

De hier vermelde waarden voor opwekkingsrendementen voor verwarming mogen worden gebruikt in plaats van de waarden zoals die in tabel 14.13 van de NEN 7120 worden gegeven.

#### *Opwekkingsrendement en energiefractie:*

De in de volgende tabellen van de hoofdstukken 1 en 2 gegeven waarden voor het opwekkingsrendement en de energiefractie voor de functie ruimteverwarming van de warmtepomp mogen worden gebruikt in NEN 7120:2012. De tabelwaarden mogen voor tussenliggende waarden voor de warmtebehoefte  $Q_{H;dis;nren}$  lineair worden geïnterpoleerd. De berekeningen zijn uitgevoerd met de rekentool versie 3.5, conform bijlage E van de NEN 7120+C2:2012/A1:2017, door de DHPA geleverd 14 augustus 2018.

#### *Verbruik ventilator(en):*

In hoofdstuk 3 zijn de door de afzuigventilator, en in het geval van een module WTW-D tevens de toevoerventilator, de opgenomen elektrische vermogens weergegeven voor een drukverschil van 100 Pa.

#### *Uitgangspunten:*

Lucht/water-warmtepomp, werkend uitsluitend met ventilatie afvoerlucht als bronmedium.

Als uitgangspunt bij de berekeningen is er vanuit gegaan dat de warmtepomp bij alle buitentemperaturen en alle afgiftetemperaturen in bedrijf blijft en de bijverwarming alleen in bedrijf komt wanneer de warmtepomp de warmtebehoefte niet kan dekken.

#### *Hulpenergie:*

De in de volgende tabellen van hoofdstukken 1 en 2 gegeven waarden voor hulpenergie  $W_{H;aux}$  mogen worden gebruikt in NEN 7120. De hier vermelde waarden voor hulpenergie mogen worden gebruikt in plaats van de waarden welke kunnen worden berekend volgens 14.7 van de NEN7120.

Het hulpenergiegebruik is opgebouwd uit:

- Het stand-by verbruik van de warmtepomp gedurende de tijd dat de compressor niet draait voor de functie ruimteverwarming;
- Het totale verbruik van de cv-pomp, inclusief voor-en nadraaitijd.

Het hulpenergiegebruik genoemd in deze verklaring betreft alleen het verbruik van de warmtepomp voor het gedeelte van de warmtevraag wat door de warmtepomp wordt gedekt. Het hulpenergiegebruik van een eventuele bijstook dient apart te worden bepaald en valt buiten deze verklaring.

In de tabellen worden de volgende symbolen en termen gebruikt:

|                      |   |
|----------------------|---|
| $\eta_{H;gen;si;hp}$ | is het dimensieloze opwekkingsrendement voor ruimteverwarming, van de elektrische warmtepomp in systeem $s_i$ ;                                 |
| $F_{H;gen;si,gpref}$ | is de dimensieloze energiefractie voor ruimteverwarming, die de warmtepomp levert aan het systeem $s_i$ ;                                       |
| $Q_{H;nd}$           | is de warmtebehoefte waarin systeem $s_i$ moet voorzien, in MJ per jaar;  |
| $A_{g;tot}$          | is het gebruiksoppervlak van de woning, in $m^2$ ;  |
| $\theta_{sup}$       | is de ontwerp aanvoertemperatuur van het warmte opwekkingsstelsel ten behoeve van ruimteverwarming, in $^{\circ}C$ ;                            |
| $Q_{H;dis;nren}$     | is de hoeveelheid energie ten behoeve van de energiefunctie verwarming, in MJ per jaar;   |
| $W_{H;aux}$          | is de hoeveelheid hulpenergie (stand-by verbruik elektronica en verbruik cv-pomp) ten behoeve van de energiefunctie verwarming, in MJ per jaar. |

Het nominale verwarmingsvermogen van de Ecolution Modul-AIR Solo of Ecolution Modul-AIR Flex bedraagt 1,594 kW (bij EN 14511-conditie L20/W35 en ventilatiehoeveelheid van 50 l/s).

## Ecolution Modul-AIR Solo of Ecolution Modul-AIR Flex:

**OPWEKKINGSRENDEMENT RUIMTEVERWARMING  $\eta_{H;gen;si;hp}$ , ENERGIEFRACTIE  $F_{H;gen;si,gpref}$  EN HULPENERGIE  $W_{H;aux}$**

### Hoofdstuk 1 - Woningen met een laag energiegebruik (WLE)

|   |                          | $\theta_{sup} \leq 30 \text{ }^\circ\text{C}$   |       |       |       |       |       |       |       |

### Hoofdstuk 3 - Hulpenergie ventilatie

Tabel 1: Ecolution Modul-AIR zonder ventilatielucht-toevoermoduul WTW-D.  
Hulpenergie voor ventilatie zoals bepaald bij een drukverschil van 100 Pa.  
Deze tabel is van toepassing voor woningen met ventilatietype C.

|                            | Ecolution Modul-AIR           |
|----------------------------|-------------------------------|
| Ventilatie-debiet<br>[l/s] | $P_{\text{nom;el}}$<br>[Watt] |
| 30                         | 18,2                          |
| 40                         | 22,4                          |
| 50                         | 28,8                          |
| 60                         | 36,1                          |
| 70                         | 45,4                          |
| 80                         | 54,4                          |

Tabel 2: Ecolution Modul-AIR inclusief ventilatielucht-toevoermoduul WTW-D.  
Hulpenergie voor ventilatie zoals bepaald bij een drukverschil van 100 Pa.  
Deze tabel is van toepassing voor woningen met ventilatietype D.

|                            | Ecolution Modul-AIR           | WTW_D                         | Som                           |
|----------------------------|-------------------------------|-------------------------------|-------------------------------|
| Ventilatie-debiet<br>[l/s] | $P_{\text{nom;el}}$<br>[Watt] | $P_{\text{nom;el}}$<br>[Watt] | $P_{\text{nom;el}}$<br>[Watt] |
| 30                         | 18,2                          | 14,2                          | 32,4                          |
| 40                         | 22,4                          | 17,5                          | 39,9                          |
| 50                         | 28,8                          | 22,1                          | 51,0                          |
| 60                         | 36,1                          | 27,1                          | 63,2                          |
| 70                         | 45,4                          | 32,6                          | 78,0                          |
| 80                         | 54,4                          | 43,9                          | 98,3                          |
